- Andesa's ***ADASTAR Q+™*** Monthly Cash Value Reporting Feature 1

✓ **Flashback**
- If You Forgot Your Password 3

Latest Announcement

Andesa's ***ADASTAR Q+™*** Plan Administration tools support the sophisticated recordkeeping requirements inherent to non-qualified deferred compensation plans. Additionally they offer a streamlined solution for brokers and their clients, supplying all with the highest quality of trustworthy data.

With Andesa's full suite of cloud-based solutions, there's no hardware to purchase and maintain, no extra staff to on-board or make redundant, and no manual processes. Capturing, storing, auditing, reporting and delivering customer data are easy — and costs: predictable.

The ***Q+™*** web-based plan administration system has far too many features to cover in a single release of the ***News Flash***. Therefore, we'll focus this edition on the uploading and management of the insurance values needed to support the **Monthly Cash Value Reporting** feature of ADASTAR ***Q+™*** system.

Monthly Cash Value Reporting

an Exciting Feature of Andesa's ADASTAR Q+™ State-of-the-Art Plan Administration System

Anyone who works with plan administration knows that there are many parts and pieces of managing and reporting insurance values. The following list provides a description of the basic time-consuming, labor-intensive procedures for handling insurance values (i.e., uploading, validating, and adjusting data), as well as how the ***ADASTAR Q+™ Values Uploader*** makes these tasks easier and more efficient.

- **Uploading**
  The uploading of values typically involves the challenging process of inputting many different formats of data into a "repository" (often a spreadsheet or database).

  Andesa's solution provides an easy way to:
  - Upload insurance values
  - Use existing, predefined formats, or create your own unique formats
  - Upload comma, pipe, semicolon, and tab delimited files (including .csv, .xls, txt files)
  - Set policy effective dates outside or inside the file
  - Combine multiple effective dates in one source file
  - Stage of data so it can be released into the system at a user-specified time
  - Use a variety of options for data release: batch release, individual release, good release (i.e., records without any error or warning)

(Continued on next page)

- **Validating**
  The validation of data usually requires the tedious, detail-intensive task of comparing newly received data with the existing policy information for changes, inconsistencies, transactions and general errors.

  Andesa's solution provides time-saving and accurate ways to find/view:
  - Unmatched Policy Errors
  - No Prior Month Values Warnings
  - Census Data Errors
  - Values Already Loaded Warnings
  - Crediting Rate Variances
  - Equity Value Variances
  - Death Benefit Variances
  - Current Yield Variances
  - Unmatched Client Warnings
  - Unmatched Accounting Transaction Warnings

- **Adjusting**
  The adjustment of data can range from a minimum of the time-consuming chores of scrubbing data files to addressing rounding variances on a policy-by-policy basis.

  Andesa's solution provides efficient ways to:
  - Filter records for specific variances (such as Equity Difference Variance)
  - Adjust interest income before releasing data into the system.

Overall, what used to be confusing and complex procedures involved in managing insurance values is now easily addressed with the ***ADASTAR Q+™*** plan administration system.

For more information about ADASTAR Q+™, please contact Ken Ricks at ken.ricks@andesaservices.com.

In the next edition of Andesa's ***News Flash***, look for discussions regarding:

- Scheduling, creating, and automatically generating a cash value report package
- Delivering a finished, market-ready, report package to the plan sponsor via Andesa's "self-service delivery system"

If You Forget Your Password…

You can use the Password Reset feature to reset your forgotten password without having to request assistance.

From the ADASTAR login screen:

1. Enter your login ID, then click on the **Forgot Password?** link to display your custom security question.
2. Enter your personal security answer, then click Submit Answer to send a temporary password to your designated email.

In the email you receive from the Help Desk:

3. Select and copy the password from the email message.

On the ADASTAR login screen:

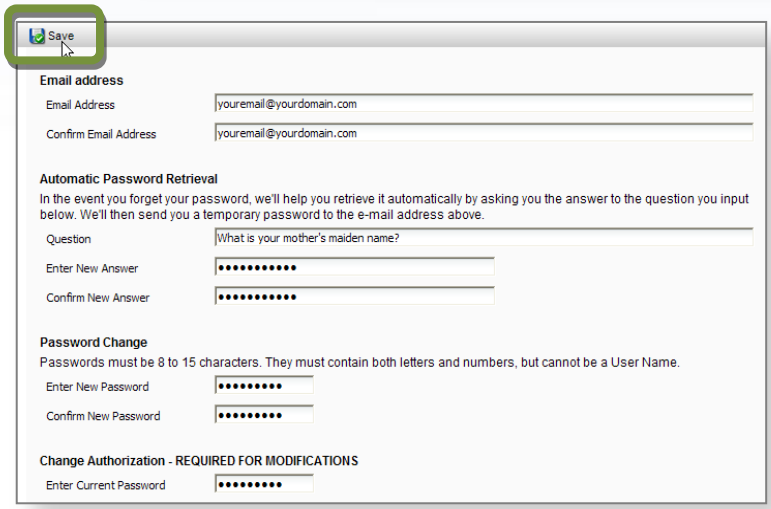
4. Enter your regular User ID, paste the temporary password into the **Password** field, then click Submit.
   - *A prompt will appear to tell you that you need to change your password.*
5. Click OK to close the prompt and display the screen showing your profile information.

On the profile information screen:

6. Enter and confirm your new password, then enter your temporary password.

   Tip:
   You can copy and paste the temporary password from the email into the "Enter current password" field.

7. Click **Save** to store the new password and display the ***ADASTAR*** system.



Important System Information: Safeguard Your Password

Please remember the importance of safeguarding your password. Because of the heightened awareness and risks of leaking personal financial information, there are significant legal liabilities associated with not protecting your password.

IMPORTANT!

The Andesa System automatically encrypts all passwords, thereby restricting access to the password to the user only. Due to Sarbanes-Oxley legislation and SAS70 requirements, it is against Andesa's policy to allow our employees or our users to share User IDs with anyone.
